INTISARI

Latar Belakang: Banyaknya masyarakat yang menyebarkan data pribadi pasien covid-19 menjadikan hal tersebut dapat diketahui orang lain tanpa seizin yang bersangkutan serta dapat melanggar kode etik kerahasiaan rekam medis maka dari itu diperlukan pengetahuan sebagai dasar pembentukan tindakan seseorang berdasarkan penelitian dan pengalaman.

Tujuan Penelitian: Tujuan dalam penelitian ini adalah mengetahui tingkat pengetahuan masyarakat terkait kerahasiaan data pribadi pasien covid-19 di Kelurahan Sorosutan.

Metode Penelitian: Penelitian ini menggunakan jenis penelitian kuantitatif dengan menggunakan metode penelitian deskriptif.

Hasil Penelitian: Tingkat pengetahuan paling banyak dengan kategori kurang sebanyak 40 responden (43,48%). Berdasarkan hasil karakteristik masyarakat yaitu usia di mana yang ikut berpartisipasi dalam penelitian ini paling banyak berusia 20-40 tahun dengan jumlah 49 orang (53,26%). Pada karakteristik jenis kelamin lebih banyak perempuan dengan jumlah 58 orang (63,04%). Sedangkan karakteristik masyarakat berdasarkan tingkat pendidikan paling banyak terdapat pada tingkat SMA dengan jumlah 48 orang (52,17%).

Kesimpulan: Tingkat pengetahuan masyarakat Kelurahan Sorosutan tentang kerahasiaan data pribadi pasien covid-19 dengan kategori baik sebanyak 20 orang (21,74%), kategori cukup sebanyak 32 orang (34,78%), dan kategori kurang sebanyak 40 orang (43,48%). Sehingga diperoleh hasil skor rata-rata sebesar 62,24% dimana pengetahuan masyarakat terkait kerahasiaan rekam medis pasien covid-19 tergolong dalam kategori cukup.

OVERVIEW OF PUBLIC KNOWLEDGE LEVEL RELATED TO THE CONFIDENTIALITY OF PERSONAL DATA OF COVID-19 PATIENTS IN SOROSUTAN VILLAGE

Marisa Putri Salsabila¹, Endang Purwanti², Eniyati³

ABSTRACT

Background: The large number of people who disseminate personal data of covid-19 patients makes it known to others without the patient's permission and can violate the code of ethics for the confidentiality of medical records, therefore knowledge is needed as the basis for forming one's actions based on research and experience.

Objective: The purpose of this study was to determine the level of society regarding the confidentiality of personal data of covid-19 patients in Sorosutan Village.

Method: This study uses quantitative research using descriptive research methods.

Result: The highest level of knowledge in the less category is 40 respondents (43.48%). Based on the results of the characteristics of the community, namely the age at which the most who participated in this study were aged 20-40 years with a total of 49 people (53.26%). In terms of gender, there are more women with a total of 58 people (63.04%). While the characteristics of the community based on the level of education are mostly found at the high school level with a total of 48 people (52.17%).

Conclusion: The level of knowledge of the people of Sorosutan Village about the confidentiality of personal data of Covid-19 patients with good categories as many as 20 people (21.74%), sufficient category as many as 32 people (34.78%), and less categories as many as 40 people (43.48%). So that an average score of 62.24% was obtained, where public knowledge about the confidentiality of the medical records of covid-19 patients was in the sufficient category.
