

**PENGARUH KELENGKAPAN PENGISIAN LEMBAR RESUME MEDIS
DAN PENGEMBALIAN REKAM MEDIS TERHADAP MUTU REKAM
MEDIS DI RUMAH SAKIT UMUM QUEEN LATIFA YOGYAKARTA
TAHUN 2018**

Andra Junarto¹, Arief Kurniawan Nur Prasetyo²

INTISARI

Latar Belakang:

Mutu rekam medis yang baik adalah rekam medis yang memenuhi indikator-indikator mutu rekam medis seperti terisi lengkapnya resume medis, akurat, tepat waktu dan pemenuhan persyaratan hukum.

Tujuan:

Mengetahui tingkat pengaruh antara kelengkapan resume medis dan pengembalian berkas rekam medis terhadap mutu rekam medis.

Metode Penelitian:

Rancangan penelitian ini menggunakan jenis penelitian kuantitatif dengan pendekatan *cross-sectional*. Pengambilan data menggunakan data sekunder rekam medis khususnya resume medis di rumah sakit umum Queen Latifa Yogyakarta. Pengambilan sampel yang digunakan dalam penelitian ini adalah lembar resume medis pada berkas pasien rawat inap di rumah sakit umum Queen Latifa Yogyakarta dan berjumlah 318 lembar resume medis dan dianalisis menggunakan model analisa regresi linier sederhana dan berganda pada program SPSS.

Hasil:

Rekapitulasi hasil dari kelengkapan pengisian lembar resume medis diperoleh 67% data terisi lengkap, pengembalian berkas rekam medis diperoleh 71.7% tepat waktu dan diperoleh mutu rekam medisnya 51.9%. Hasil hubungan antara kelengkapan kelengkapan pengisian lembar resume medis dan pengembalian berkas rekam medis terhadap mutu rekam medis diketahui bahwa nilai signifikansi dalam Uji F sebesar 0.000, hal ini lebih kecil (<) dari probabilitas 0.05.

Kesimpulan:

Ada hubungan positif antara kelengkapan pengisian resume medis dan pengembalian berkas rekam medis terhadap mutu rekam medis. Mutu rekam medis yang diperoleh dari hasil kelengkapan pengisian resume medis dan pengembalian berkas rekam medis adalah 51.9%.

INFLUENCE OF THE COMPLETION OF FILLING THE MEDICAL RESUME AND RETURN OF MEDICAL RECORD ON MEDICAL RECORD QUALITY IN LATIFA QUEEN HOSPITAL YOGYAKARTA IN 2018

Andra Junarto¹, Arief Kurniawan Nur Prasetyo²

ABSTRACT

Backgrounds:

The quality of a good medical record is a medical record that meets medical record quality indicators such as complete medical resume, accurate, timely and fulfillment of legal requirements.

Object:

To determine the level of influence between the completeness of the medical resume and the return of the medical record file to the quality of medical record.

Methods:

The design of this study uses a type of quantitative research with a cross-sectional approach. Data retrieval uses secondary data medical records, especially medical resumes at Queen Latifa General Hospital, Yogyakarta. Sampling used in this study is a medical resume sheet on the file of inpatients in Queen Latifa General Hospital Yogyakarta and totaled 318 medical resume sheets and analyzed using a simple and multiple linear regression analysis model on SPSS program

Results:

Recapitulation of the results of completing the filling of the medical resume sheet obtained 67% of complete data, the return of medical record files obtained 71.7% on time and obtained medical record quality 51.9%. The result of the relationship between completeness of completing the medical resume sheet and returning the medical record file to medical record quality is known that the significance value in Test F is 0.000, this is smaller (<) than probability 0.05.

Conclusion:

There is a positive relationship between the completeness of the medical resume filling and the return of the medical record file to the quality of medical record. The quality of medical record obtained from the results of completing medical resume filling and returning medical record files is 51.9%.

Keywords: Completeness of Completing Medical Resumes, Returning Medical Record Files, Quality of Medical Record
