INTISARI

Latar Belakang: COVID-19 merupakan jenis penyakit virus yang disebabkan oleh infeksi *SARS-COV-2*. Virus ini dapat menyerang pada anak dengan masa inkubasi 1-14 hari. Pengetahuan dan sikap dalam mencegah infeksi sangat diperlukan. Mencuci tangan adalah salah satu tindakan tindakan untuk menghilangkan atau mengurangi mikroorganisme yang menempel ditangan dilakukan dalam mencuci tangan 6 langkah dengan benar.

Tujuan Penelitian: Untuk mengetahui gambaran pengetahuan dan sikap anak usia sekolah terhadap cuci tangan 6 langkah dalam pencegahan COVID-19 di Sekolah Dasar Desa Karangrejo, Kutoarjo, Purworejo

Metode Penelitian: Dalam penelitian ini menggunakan metode kuantitatif dengan menggunakan *design* deskriptif kuantitatif. Pengambilan sampel penelitian menggunakan teknik *total sampling* yaitu sebanyak 52 responden. Instrumen yang digunakan dalam pengambilan sampel berupa kuesioner. Responden diminta untuk mengisi dua buah kuesioner yaitu kuesioner Tingkat Pengetahuan dan Sikap Mencuci Tangan. Analisis data meliputi analisis data univariat dengan frekuensi dan persentase.

Hasil Penelitian: Sebagian besar responden berusia usia 11 tahun (51,9%), serta dengan jenis kelamin perempuan (57,7%). Sebanyak 98,1% responden memiliki tingkat pengetahuan baik (98,1%) terhadap cuci tangan dan sebanyak 100% responden memiliki sikap positif terhadap cuci tangan 6 langkah.

Kesimpulan: Sebagian responden memiliki tingkat pengetahuan yang baik terhadap cuci tangan serta seluruh respon memiliki sikap positif terhadap cuci tangan 6 langkah.

Kata Kunci: COVID-19, Cuci Tangan, Usia Sekolah, Pengetahuan, Sikap.

DESCRIPTION OF KNOWLEDGE AND ATTITUDE OF SCHOOL AGE CHILDREN TO HANDS WASHING 6 STEPS IN PREVENTING COVID-19 IN ELEMENTARY SCHOOL, VILLAGE KARANGREJO, KUTOARJO, PURWOREJO

Anjar Widiyono¹. Novita Nirmalasari²

ABSTRACT

Background: COVID-19 is a type of viral disease caused by infection with SARS-CoV-2. This virus can attack children with an incubation period of 1-14 days. Knowledge and attitude in preventing infection are needed. Hand washing is one of the actions to eliminate or reduce microorganisms that stick to the hands carried out in handwashing six steps properly.

Research Objectives: the study aimed to describe the knowledge and attitudes of school-age children towards hand washing six steps in the prevention of COVID-19 at the Karangrejo Village Elementary School, Kutoarjo, Purworejo

Research Methods: In this study used a quantitative method using a quantitative *design* descriptive. The research sample was taken using the *total sampling technique* that is as many as 52 respondents. The instrument used in sampling is a questionnaire. Respondents were asked to fill out two questionnaires, namely the Knowledge Level and Handwashing Attitudes questionnaire. Data analysis includes univariate data analysis with frequency and percentage.

Research Results: Most of the respondents were 11 years old (51.9%) and female (57.7%). As many as 98.1% of respondents have a good level of knowledge (98.1%) towards hand washing, and as many as 100% of respondents have a positive attitude towards hand washing six steps.

Conclusion: Most respondents have good knowledge about handwashing, and all responses have an attitude positive for 6 step hand washing.

Keywords: Attitude, COVID-19, Knowledge, Hand Washing, School Age
