

KELENGKAPAN PENGISIAN FORMULIR REKAM MEDIS DI UNIT GAWAT DARURAT PUSKESMAS KASIHAN 1 TAHUN 2022

Arfi Dewi Marsela¹, Eniyati², Laili Rahmatul Ilmi³

INTISARI

Latar Belakang : Rekam medis harus diisi dengan lengkap, kelengkapan rekam medis dapat dilakukan menggunakan cara analisis kuantitatif yang menilai 4 komponen yaitu review identifikasi, laporan penting, autentifikasi dan pendokumentasian yang benar. Berdasarkan studi pendahuluan yang dilakukan di Puskesmas Kasihan I secara wawancara dengan pegawai Rekam Medis menyatakan bahwa menemukan beberapa rekam medis belum lengkap untuk pasien gawat darurat. Beberapa penyebab ketidaklengkapan pengisian rekam medis yaitu kelalaian dalam pengisian, serta kurangnya ketelitian petugas kesehatan oleh dokter, perawat, maupun petugas rekam medis dalam pengisian rekam medis.

Tujuan Penelitian : Penelitian ini bertujuan untuk menganalisis kelengkapan pengisian formulir rekam medis gawat darurat di Puskesmas Kasihan I.

Metode Penelitian : Jenis penelitian yang dilakukan dengan menggunakan metode deskriptif kuantitatif. Teknik pengambilan sampel dengan cara *random sampling* atau diambil secara acak. Sampel dalam penelitian ini sebanyak 64 rekam medis gawat darurat.

Hasil : Persentase rata-rata kelengkapan pada komponen identifikasi sebesar 91.6%. Komponen laporan penting sebesar 94%. Komponen autentikasi sebesar 98.5%. Dan pada komponen pendokumentasian yang benar sebesar 96%.

Kesimpulan : Kelengkapan pengisian pada formulir rekam medis gawat darurat di Puskesmas Kasihan 1 belum lengkap 100%.

Kata Kunci : *Gawat Darurat, Kelengkapan Pengisian, Puskesmas*

**COMPLETENESS OF FILLING OUT THE MEDICAL RECORD
FORM AT THE EMERGENCY DEPARTMENT OF PUSKESMAS
KASIHAN 1 OF 2022**

Arfi Dewi Marsela¹, Eniyati², Laili Rahmatul Ilmi³

ABSTRACT

Background : Medical records must be filled in completely, the completeness of medical records can be done using quantitative analysis methods that assess 4 components, namely identification reviews, important reports, authentication and correct documentation. Based on a preliminary study conducted at the Puskesmas Kasihan I in interviews with Medical Record employees, it was stated that it found some medical records were incomplete for emergency patients. Some of the causes of incompleteness in filling medical records are negligence in filling, as well as the lack of accuracy of health workers by doctors, nurses, and medical record officers in filling medical records.

Objective : This study aims to analyze the completeness of filling out the emergency medical record form at the Puskesmas Kasihan I.

Method : Types of research conducted using quantitative descriptive methods. Sampling technique by random sampling or taken randomly. The samples in this study were 64 emergency medical records.

Results : The average percentage of completeness in the identification component was 91.6%. The important component of the report is 94%. The authentication component is 98.5%. And on the correct documenting component by 96%.

Conclusion : The completeness of filling in the emergency medical record form at Puskesmas Kasihan 1 is not 100% complete

Keywords : Emergency, Completeness of Filling, Puskesmas
