INTISARI

Latar Belakang : Keberadaan anak usia sekolah yang tinggal di panti asuhan menjadi kerentanan bagi kelompok tersebut. Ketidakpedulian anak terhadap penampilan dan masih membutuhkan pendampingan dari orang tua menyebabkan perilaku *personal hygiene* anak-anak menjadi tidak terpantau. *Personal hygiene* yang buruk berdampak pada masalah kesehatan seperti diare, skabies, dan masalah psikologis seperti kurang konsentrasi.

Tujuan: Mengetahui gambaran perilaku *personal hygiene* pada Anak Usia Sekolah di Panti Asuhan Kabupaten Bantul.

Metode Penelitian: Penelitian ini merupakan penelitian deskriptif kuantitatif.. Pengambilan sampel dilakukan dengan teknik *purposive sampling* dengan melibatkan 39 responden yang tinggal di panti asuhan. Pengambilan data menggunakan kuesioner tentang perilaku *personal hygiene* dan analisis data menggunakan univariat

Hasil: Gambaran perilaku *personal hygiene* anak usia sekolah menunjukkan hasil buruk sebesar 51,3%, perilaku kebersihan pribadi dalam kategori baik yaitu 51,3%, perilaku kebersihan reproduksi laki-laki buruk (56,3%), perempuan kategori buruk (56,5%), perilaku cuci tangan kategori buruk (53,8%), dan perilaku kebersihan tempat tinggal kategori buruk (53,8%)

Kesimpulan: Gambaran perilaku *personal hygiene* anak usia sekolah yang tinggal di Panti Asuhan Kabupaten Bantul menunjukkan hasil buruk sebesar 51,3%.

Kata Kunci: *Personal Hygiene*, Panti Asuhan, Anak Usia Sekolah

DESCRIPTION OF HYGIENE PERSONAL BEHAVIOR IN SCHOOL AGE CHILDREN IN BANTUL DISTRICT ORPHANAGE

¹Tesa Lonika Juliana, Ratna Lestari²
Email: lonikajuliana20@gmail.com

ABSTRACT

Background: The existence of school-age children living in orphanages is a vulnerability for the group. Carelessness of children towards appearance and still need assistance from parents causes children's personal hygiene behavior to be unmonitored. Poor personal hygiene affects health problems such as diarrhea, scabies, and psychological problems such as lack of concentration.

Objective: To know the description of personal hygiene behavior in School-age Children in the Bantul Regency Orphanage

Research Methods: This research is a quantitative descriptive study. Sampling was done by purposive sampling technique involving 39 respondents living in orphanages. Retrieval of data using a questionnaire about personal hygiene behavior and data analysis using univariate

Results: The description of personal hygiene behavior of school-aged children showed poor results of 51.3%, personal hygiene behavior in the good category that is 51.3%, male reproductive hygiene behaviors were bad (56.3%), women were poor categories (56, 5%), bad hand washing behavior (53.8%), and poor household hygiene behavior (53.8%)

Conclusion: Personal hygiene behavior of school-age children living in Bantul Orphanage showed 51.3% poor results.

Keywords: Personal Hygiene, Orphanages, School Age Children
