

ANALISA PENYEBAB TERHENTINYA PENGINDEKSAN PENYAKIT BERPENGARUH TERHADAP PELAPORAN DI RUMAH SAKIT UMUM QUEEN LATIFA YOGYAKARTA TAHUN 2018

Vena Ari Susanti¹, Laili Rahmatul Ilmi²

INTISARI

Latar Belakang: Rumah Sakit adalah institusi pelayanan kesehatan yang menyelenggarakan pelayanan kesehatan perorangan serta paripurna yang menyediakan pelayanan rawat inap, rawat jalan dan rawat darurat. Pelayanan yang diberikan dimulai pada saat pasien melakukan admisi, dilanjutkan dengan pencatatan data medis pasien yang mendapat pelayanan di rumah sakit, serta penanganan berkas rekam medis. Penyelenggaraan sistem rekam medis yang baik salah satunya harus ditunjang oleh pembuatan indeksing yang baik. Berdasarkan hasil studi pendahuluan di RS Queen Latifa Yogyakarta diketahui bahwa proses pengindeksan penyakit terhenti dari bulan januari 2016 sampai sekarang

Tujuan: Tujuan penelitian ini adalah mengetahui faktor penyebab terhentinya indeks penyakit yang berpengaruh terhadap pelaporan di RS Queen Latifa Yogyakarta

Metode : Jenis penelitian pada penelitian ini adalah deskriptif pendekatan kualitatif. Sampel subjek pada penelitian ini yaitu 4 petugas rekam medis, dan 1 dokter. Sampel objek pada penelitian ini yaitu buku register rawat inap, spo koding, spo pelaporan dan template sirs. Teknik pengambilan sampel subjek menggunakan *purposive sampling*.

Hasil: Berdasarkan hasil penelitian diketahui bahwa proses pengisian diagnosis di masing-masing poliklinik dilaksanakan oleh dokter yang merawat, pengisian pengkodean penyakit masih manual menggunakan ICD-10 dan dilaksanakan oleh petugas rekam medis. proses pembuatan indeks penyakit terhenti dari bulan januari 2016 dan menyebabkan pembuatan pelaporan di rumah sakit menjadi terhambat dan pelaporan juga tidak lengkap angkanya sehingga pihak dinas mengirimkan kembali laporan tersebut untuk dilengkapi

**ANALYSIS OF THE CAUSES OF CESSATION OF DISEASE INDEXING
AFFECTS REPORTING IN QUEEN LATIFA GENERAL HOSPITAL IN
2018**

Vena Ari Susanti¹, Laili Rahmatul Ilmi²

ABSTRACT

Background: Hospital is a health service that provides health services and services that provide inpatient, outpatient and emergency care services. Services provided start when the patient performs an admission, accompanied by recording data on patients receiving services at the hospital, as well as handling medical record files. The implementation of a good medical record system, one of which must be supported by good indexing. Based on the results of a preliminary study at Queen Latifa Hospital in Yogyakarta, it was found that the disease indexing process was stopped from January 2016 until now

Objective: The purpose of this study was to determine the factors the cessation of the disease index which affect the reporting at the Queen Latifa Hospital in Yogyakarta at Queen Latifa General Hospital

Method: This study uses qualitative descriptive. Design research using Cross Sectional. Subject samples in this study . Subject samples in this study were 4 medical record officers and 1 doctor. Object samples in this study are inpatient register books, spo coding, reporting spo, and template sirs. Subject sampling technique uses purposive sampling

Results: Based on the results of interviews in August it was found that the process of filling the diagnosis in each polyclinic was carried out by the treating physician, filling the disease coding was still manual using ICD-10 and carried out by medical record officers. the process of making the disease index stopped from January 2016 and caused the making of reporting at the hospital to be hampered and reporting was also incomplete in numbers so that the agency sent the report back to be completed
