INTISARI

Latar belakang : Menurut Depkes RI No.75 (2014), untuk menyelenggarakan UKM dan UKP salah satu syaratnya adalah menyelenggarakan Perkesmas, dan hasil kegiatan Perkesmas akan dievaluasi melalui laporan kegiatan Perkesmas, dan dijadikan sebagai acuan kegiatan Perkesmas ditahun berikutnya. Laporan Perkesmas di kabupaten Kulon Progo belum berjalan dengan baik Pada tahun 2015 dan 2016 hanya 11 Puskesmas yang membuat laporan tahunan.

Tujuan : Mengetahui hubungan pengetahuan perawat tentang Perkesmas dengan sikap perawat dalam pelaporan kegiatan Perkesmas di Kabupaten Kulon Progo.

Metode : Jenis penelitian deskriptif analitikkorelasi dengan pendekatan *crosssectional*. Populasi berjumlah 56 perawat di 11 Puskesmas, tehnik sampling yang digunakan adalah total sampling, dengan menggunakan Instrumen kuesioner pengetahuan dan sikap.

Hasil : Mayoritas perawat memiliki pengetahuan kurang (48,25%), Sikap positif (58,6%), usia dewasa awal (50%), jenis kelamin perempuan (67,9%), tingkat pendidikan DIII-Keperawatan (85,7%), masa kerja 11-20 tahun (37,5%). Hasil analisis bivariat, tidak ada hubungan pengetahuan perawat tentang perkesmas dengan sikap perawat dalam pelaporan Perkesmas ($p=0,413$).

Kesimpulan : Tidak ada hubungan pengetahuan perawat dengan sikap perawat dalam pelaporan kegiatan Perkesmas.

Saran: Dinas Kesehatan Kabupaten Kulon Progo intuk memfasilitasi pelatihan mengenai Perkesmas, kepala Puskesmas untuk memotivasi perawat Perkesmas mengikuti pelatihan, dan kepada peneliti selanjutnya agar meneliti faktor-faktor yang mempengaruhi sikap perawat dalam pelaporan kegiatan Perkesmas.

Kata kunci : Pengetahuan tentang Perkesmas, Sikap dalam pelaporan, Perawat.

ABSTRACT

Background: As written in the regulation of *Depkes RI* no.75 (2014), one requirement of community health center to conduct *UKM* and *UKP* is to conduct community health center. The result of community health center activities is evaluated. Then, this report is used as a reference for writing the next community health center activities in the upcoming year. The community health center report in Kulon Progo regency didn't run well in 2015 and 2016 since there were 11 community health cares that didn't make their yearly report.

Objective: This study is aimed at investigating the correlation between nurses' knowledge about community health center and their attitude in reporting the community health center's activities in Kulon Progo Regency.

Method: This study is a correlation analytic descriptive research with cross-sectional approach. The population of the research was 56 nurses in 11 community health center selected through total random sampling using questioners that focused on knowledge and attitude.

Finding: The majority of the respondents has low knowledge (48, 25%), positive attitude (58, 6 %), early adulthood age (50%), female (67, 9%), education level of diploma. (85, 7%) , 11-20 years of service (37, 5%). The bivariate analysis shows that there is no correlation between nurses' knowledge about community health center and their attitudes in reporting the community health center's activities ($p=0,413$).

Conclusion: There is no is no correlation between nurses' knowledge reporting the community health center's activities.

Suggestion: For other researchers, it's needed to conduct a research to investigate factors influencing nurses' attitude reporting the community health center's activities.

Key words: knowledge about community health center, attitude in reporting the community health center's activities
