

HUBUNGAN SIKAP DENGAN KEPATUHAN PERAWAT
DALAM *HAND HYGIENE FIVE MOMENT*
DI RUANG RAWAT INAP
KELAS III RSUD SLEMAN

INTISARI

Esti Suhartini¹, Rahayu Iskandar²

Latar Belakang: Mencuci tangan adalah salah satu langkah efektif untuk memutus rantai infeksi silang, mencuci tangan lima momen yaitu: sebelum bersentuhan dengan pasien, sebelum melakukan prosedur bersih atau steril, setelah bersentuhan dengan cairan tubuh pasien, setelah bersentuhan dengan pasien, setelah bersentuhan dengan lingkungan pasien.

Tujuan Penelitian: Diketahui hubungan sikap dengan kepatuhan perawat dalam *hand hygiene five moment* di ruang rawat inap kelas III RSUD Sleman.

Metode Penelitian: Rancangan penelitian ini adalah non eksperimental dengan rancangan penelitian *descriptive correlational studies*. Besar sampel yang digunakan adalah 60 perawat dari ruang rawat inap kelas III RSUD Sleman. Analisa data yang digunakan adalah uji korelasi gamma.

Hasil: Hasil penelitian sikap perawat dalam *hand hygiene five moment* di ruang rawat inap kelas III RSUD Sleman menunjukkan sikap positif sebesar 42 perawat (70,0%) dan kepatuhan perawat menunjukkan 38 perawat (63,3%). Hasil uji bivariat didapatkan ada hubungan bermakna antara sikap dengan kepatuhan perawat dalam *hand hygiene five moment* di ruang rawat inap kelas III RSUD Sleman (p -value = 0,000) dengan uji korelasi didapatkan nilai r 0,959 yang menunjukkan ada keeratan hubungan sangat kuat dan pola hubungan positif.

Kesimpulan: Berdasarkan hasil penelitian diperoleh kesimpulan bahwa ada hubungan antara sikap dengan kepatuhan perawat dalam *hand hygiene five moment* di ruang rawat inap kelas III RSUD Sleman dengan keeratan hubungan sangat kuat dan pola hubungan positif.

Kata Kunci: Sikap, kepatuhan, *hand hygiene five moment*, perawat

The Correlation between Behavior and Nurse's Compliance in Hand Hygiene Five Movement in Inpatient Ward of Third Grade in Sleman General Hospital

ABSTRACT

Esti Suhartini¹, Rahayu Iskandar²

Background: Washing hand is an effective way to break cross-infection chain. Hand hygiene five moment are such as : prior to contact with patient, prior to sanitation or sterilization procedure, post contact with patient's body fluid, post contact with patient, post contact with patient's surroundings.

Objective: To identify The Correlation between Behavior and Nurse's Compliance in Hand Hygiene Five Movement in Inpatient Ward of Third Grade in Sleman General Hospital

Method: The type of this study was non experimental with descriptive and correlational study design. The number of samples was 60 nurses in inpatient ward of third grade in Sleman general hospital. Data analysis method was gamma correlational test.

Result: The study result identified that nurses' behaviors in hand hygiene five moment in inpatient ward of third grade in Sleman general hospital were positive behaviors as many as 42 nurses (70,0%) and compliant behaviors as many as 38 nurses (63,3%). The result of bivariate test found out significant correlations between behaviors and nurses' compliance in hand hygiene five moment in inpatient ward of third grade in Sleman general hospital (p value of 0,000) and correlation test figured out r value of 0,959 which indicated strong and positive correlations.

Conclusion: There were significant correlations between behaviors and nurses' compliance in hand hygiene five moment in inpatient ward of third grade in Sleman general hospital with strong and positive correlations.

Keywords: Behavior, Compliance, Hand Hygiene Five Moment, Nurse.
