## **NURSES' CARING BEHAVIOURS IN THE SURGICAL WARD PANEMBAHAN SENOPATI HOSPITAL OF BANTUL**

Anisa Rozalina<sup>1</sup>, Deby Zulkarnain Rahardian Syah<sup>2</sup>

### **ABSTRACT**

**Background:** Nursing is a profession that has large number of workers in the Hospital. Nursing is also the nearest profession which interacted with patients, patient's family, and community. Caring is a universal phenomenon and occurred in the entire cultures. Caring in nursing was applied continuously and needs sincerity in its practice.

**Aims:** To describe nurses' caring behaviours in the surgical ward Panembahan Senopati Hospital of Bantul.

**Methods:** A descriptive quantitative study was conducted on 44 accidentally patients with cross-sectional approach. Nurses' caring behaviours was measured by a validated questionnaire.

**Results:** Majority of respondents were male (n=25, 56.8%). As many as 21 patients (47.7%) in range 51 – 60 year old. Most of patients were graduated from Elementary School (45.5%). The highest nurses' caring behaviours in the surgical ward had categorised as good by patients (n=34, 77.3%). As many as 8 patients (18.2%) respondents perceived as moderate caring and the rest (n=2, 4.5%) perceived nurses' caring behaviours as less caring.

**Conclusions:** Application of caring behaviours by nurses in the surgical ward Panembahan Senopati Hospital is good. Most of patients have a positive response towards caring behaviours that performed by nurses.

**Keywords:** Caring, nurses' caring behaviours
