

# GAMBARAN PERKEMBANGAN ANAK USIA PRA SEKOLAH DI PAUD DAN TK AISYIYAH BLAWONG

Mutia Salsabila<sup>1</sup>, Khristina Dias Utami<sup>2</sup>

## INTISARI

**Latar Belakang :** Perkembangan ialah perubahan, pertumbuhan, perubahan morfologi, dan integrasi bagian-bagian fisik dan fungsional, pematangan, atau perubahan mendasar yang terus menerus dan bertahap yang belum dipelajari sejak lahir sampai mati pada suatu organisme. Masa prasekolah adalah periode ketika anak berusia antara 3 hingga 5 tahun. Selama masa ini, perkembangan intelektual anak mengalami pertumbuhan yang cepat dan rentan terhadap gangguan perkembangan. Untuk mendeteksi gangguan perkembangan pada anak, bisa dilakukan dengan melakukan skrining awal menggunakan Denver II.

**Tujuan Penelitian :** Untuk mengetahui bagaimana gambaran perkembangan anak di PAUD dan TK Aisyiyah Blawong.

**Metode Penelitian :** Penelitian ini menggunakan metode deskriptif dengan rancangan penelitian survei deskriptif. Menggunakan teknik *purposive sampling* pada 70 responden. Alat ukur yang digunakan ialah lembar Denver II.

**Hasil Penelitian :** Sebagian besar responden berumur 4 tahun (68,6%), berjenis kelamin perempuan (60,0%). Pendidikan yang di tempuh orang tua anak berada di tinggi (tamam SMA, Perguruan tinggi) sebanyak (95,7%), dan pekerjaan orang tua anak karyawan swasta (30,0%). Sebagian besar memiliki perkembangan kategori normal sebanyak (61,4%), dan sebagian kecil memiliki perkembangan kategori *suspec* sebanyak (38,6%).

**Kesimpulan :** Sebagian besar (61,4%) perkembangan anak usia pra sekolah di PAUD dan TK Aisyiyah Blawong memiliki kategori normal.

**Kata Kunci :** Denver II, Perkembangan, Prasekolah.

# OVERVIEW OF THE DEVELOPMENT OF PRESCHOOL CHILDREN IN PAUD DAN TK AISIYIAH BLAWONG

Mutia Salsabila<sup>1</sup>, Khristina Dias Utami<sup>2</sup>

## ABSTRACT

**Background :** Development is the process of change, growth, morphological transformation, and integration of physical and functional parts, maturation, or fundamental changes that continuously and gradually occur in an organism from birth to death. The preschool period refers to the time when a child is between 3 to 5 years old. During this phase, the child's intellectual development experiences rapid growth and is vulnerable to developmental disorders. To detect developmental disorders in children, early screening can be conducted using the Denver II test.

**Research Objective :** To understand the developmental profile of children in PAUD and TK Aisyiyah Blawong.

**Research Method :** This study employs a descriptive method with a descriptive survey research design. The purposive sampling technique was used, involving 70 respondents. The measurement tool used was the Denver II screening sheet.

**Research Results :** The majority of respondents were 4 years old (68.6%) and female (60.0%). Most of the children's parents had a high level of education (high school graduates, college) at 95.7%, and the parents' occupation was primarily private employees (30.0%). A large portion of the children showed normal development (61.4%) falling into the normal category, while a smaller portion (38.6%), fell into the suspect category.

**Conclusion :** The majority (61,4%) of preschool children at PAUD and TK Aisyiyah Blawong fall within the normal developmental category.

**Keywords :** Denver II, Development, Preschool.
