# HUBUNGAN TINGKAT PENGETAHUAN DENGAN SIKAP KADER POSYANDU DALAM PELAYANAN POSYANDU DI DESA GOTAKAN PANJATAN WATES KULON PROGO

## INTISARI

Yuliani Kurnia Sari<sup>4</sup>, Sri Arini<sup>5</sup>, Agus Warseno<sup>6</sup>

**Latar Belakang** : Salah satu peran aktif masyarakat dalam penyelenggaraan upaya kesehatan masyarakat diwujudkan melalui berbagai upaya yang dimulai dari diri sendiri, keluarga sampai dengan Upaya Kesehatan Bersumber Masyarakat (UKBM). Upaya kesehatan yang bersumber masyarakat ini telah dikembangkan salah satunya adalah Posyandu (Depkes RI, 2004). Posyandu dapat dimanfaatkan dengan baik apabila penyelenggaraannya dilaksanakan oleh kader yang sudah dilatih, memiliki pengetahuan dan sikap yang baik sehingga dapat memotivasi masyarakat untuk berperan aktif dalam meningkatkan kesehatan.

**Tujuan** : Penelitian ini bertujuan untuk mengetahui hubungan tingkat pengetahuan dengan sikap kader posyandu dalam pelayanan posyandu di desa Gotakan Panjatan Wates Kulon Progo.

**Metode** : Penelitian ini merupakan penelitian Deskriptif dengan rancangan *cross sectional*. Sampelnya adalah kader posyandu yang berjumlah 40 orang. Instrumen pengumpulan data menggunakan kuesioner.

**Hasil Penelitian** : Hasil uji *chi square* peroleh *p*-value sebesar  $0,017 < \alpha$  (0,05) sehingga dapat disimpulkan ada hubungan yang signifikan antara tingkat pengetahuan kader tentang Posyandu dengan sikap dalam pelayanan Posyandu di Desa Gotakan, Panjatan, Wates, Kulon Progo. Nilai *koefisiensi kontingansi* sebesar 0,411 menunjukkan tingkat hubungan yang terjadi antara tingkat pengetahuan kader tentang Posyandu dengan sikap dalam pelayanan Posyandu adalah sedang.

**Kesimpulan** : Ada hubungan yang signifikan antara tingkat pengetahuan dengan sikap kader posyandu dalam pelayanan posyandu. Sedangkan keeratan hubungan tingkat pengetahuan dengan sikap kader posyandu dalam pelayanan posyandu adalah sedang.

**Kata Kunci** : Tingkat Pengetahuan, kader posyandu, sikap, pelayanan posyandu
