**THE DESCRIPTION OF PREGNANT MOTHERS' KNOWLEDGE ABOUT  
ANTENATAL CARE VISIT IMPLEMENTATION IN COMMUNITY  
HEALTH CENTER JETIS II AUTHORITY AREA BANTUL**

Tri Astuti <sup>1</sup>, Fatimah Dewi Anggareni<sup>2</sup>, Sujiyatini <sup>3</sup>

**ABSTRACT**

**Background** : Health Agency (2011) claims that maternal mortality rate is derived from hemorrhage, disorder of high blood tension, and complication and infection during pregnancy and late detection on early risks during pregnancy. Factors that influence KI and K4 achievement in pregnant mothers are internal factors such as age, parity, and external factors such as knowledge, attitude, economy, support, geography, information, social culture. The result of preliminary study to 10 respondents identified 4 respondents (40%) of poor category, 3 respondents (30%) of good category, and 3 respondents (30%) of sufficient category.

**Objective** : To find out the description of pregnant mothers' knowledge about antenatal care visit implementation.

**Method** : The method in this study was descriptive with descriptive survey design. Population in this study was 56 respondents and samples were 56 respondents. Samples were selected through total sampling method and primary data for data collecting. Data were collected by using questionnaires. Data analysis applied descriptive analysis.

**Result** : Good knowledge level were 27 respondents (30,0%), sufficient knowledge level were 42 respondents (46,7%), poor knowledge level were 21 respondents (23,3%).

**Conclusion** : Knowledge about antenatal care visit implementation was mostly in sufficient category as many as 42 respondents (46,7%) and the few rest were in poor category as many as 21 respondents (23,3%).

**Suggestion** : It is recommended for pregnant mothers to understand better about the importance of antenatal care visit.

**Keywords** : Knowledge, Visit.
