

# Gambaran Kepatuhan Ibu Hamil TM III Dalam Melakukan Kunjungan Ulang ANC (K4) di Puskesmas Girimulyo 1 Kulon Progo Yogyakarta

Astuti Dewi Utami<sup>1</sup>, Alfie Ardiana Sari<sup>2</sup>

## INTISARI

**Latar Belakang** : Pelayanan ANC (*antenatal care*) penting diketahui oleh ibu hamil karena dapat membantu mengurangi angka kematian ibu dan bayi. Target MDG's 2015 menurunkan jumlah AKI mencapai 102/100.000 kelahiran hidup, salah satu cara untuk menurunkan jumlah AKI yaitu dengan meningkatkan kepatuhan *Antenatal Care*. Pelayanan antenatal dapat dilihat dengan cakupan kunjungan yang kurang dari standar minimal yaitu Trimester I 1 kali, Trimester II 1 kali, dan Trimester III 2 kali.

**Tujuan** : Diketuainya tentang gambaran kepatuhan ibu hamil Trimester III dalam melakukan kunjungan ulang ANC (K4) di Puskesmas Girimulyo 1 Kulon Progo Yogyakarta.

**Metode** : Penelitian ini menggunakan jenis penelitian *Deskriptif Kuantitatif*, metode penelitian *Survey Deskriptif* dengan pendekatan *Studi Retrospektif*. Pengambilan sampel dengan metode *total sampling*, besar sampel 75 ibu hamil TM III. Analisa data menggunakan univariat.

**Hasil** : Hasil dari penelitian ini didapatkan dari 75 responden sebanyak 52 orang (69,3%) patuh dan 23 orang (20,7%) tidak patuh. Sebagian besar berusia 20-35 tahun sebanyak 58 orang (77,3%), paritas tertinggi primipara sebanyak 37 orang (49,3%), dan pendidikan tertinggi SD-SMP sebanyak 53 orang (70,7%).

**Kesimpulan** : Hasil penelitian ini dapat disimpulkan bahwa ibu hamil Trimester III sudah dikatakan patuh dalam melakukan kunjungan ulang ANC (K4) sebesar 69,3%.

**Kata Kunci** : Kepatuhan, Kehamilan, ANC (K4).
