INTISARI

Latar Belakang : Perilaku perawat dalam membuang sampah infeksius dan non infeksius jadi penting untuk diobservasi karena aktivitas, dalam melakukan asuhan keperawatan banyak sampah benda tajam seperti jarum dan ampul yang harus dipisahkan berdasarkan sampah infeksius dan non infeksius. Perilaku perawat dalam mematuhi peraturan yang ada dalam membuang sampah menjadi penting karena setiap sampah infeksius dan non infeksius yang dihasilkan memiliki tempatnya masing-masing dan tidak boleh tercampur antara sampah infeksius dan non infeksius dikarenakan setiap sampah infeksius yang dihasilkan memiliki prosedur masing-masing dalam penanganannya.

Tujuan : Mengetahui gambaran perilaku perawat dalam membuang sampah infeksius dan non infeksius di RSUD Panembahan Senopati Bantul.

Metode : Desain yang digunakan dalam penelitian ini adalah penelitian deskriptif, Penelitian ini menggunakan metode *cross sectional* yaitu penilaian pada beberapa populasi yang diamati Sampel diambil dengan teknik *random sampling* yaitu 193 perawat di ruang rawat inap dan rawat jalan RSUD Panembahan Senopati Bantul. Hasil penelitian dianalisis dengan distribusi frekuensi dan persentase.

Hasil : Karakteristik perawat di RSUD Panembahan Senopati Bantul adalah berdasarkan pada umur, jenis kelamin, pendidikan, dan masa kerja. Perilaku perawat dalam membuang sampah infeksius di RSUD Panembahan Senopati Bantul sebagian besar adalah kategori baik, perilaku perawat dalam membuang sampah non infeksius di RSUD Panembahan Senopati Bantul kategori baik, perilaku perawat dalam membuang sampah infeksius dan non infeksius di RSUD Panembahan Senopati Bantul kategori baik.

Kesimpulan : Perilaku perawat dalam membuang sampah infeksius dan non infeksius di RSUD Panembahan Senopati Bantul kategori baik.

Kata kunci : Perilaku perawat
