Prihati Yuningrum¹, Fahrudin², Nani Kanari³

Latar belakang : Perkembangan bahasa pada anak dipengaruhi oleh beberapa faktor, diantaranya pengetahuan dan stimulasi bahasa. Dengan dilakukan stimulasi lebih dini, diharapkan kemampuan bahasa pada anak akan lebih optimal sehingga dapat meningkatkan kualitas komunikasi. Anak usia kurang dari 2 tahun sangat tergantung pada orang – orang yang berada disekitarnya terutama ibu. Untuk itulah maka diharapkan, hendaknya ibu lebih menyadari dan peduli terhadap perkembangan anak. Ibu harus paham deteksi dini tumbuh kembang anak karena tingkat pengetahuan dan pola asuh ibu sangat mempengaruhi perkembangan bahasa anak

Tujuan penelitian : Untuk mengetahui hubungan pengetahuan ibu primipara tentang stimulasi tumbuh kembang dengan perkembangan bahasa anak usia kurang dari 2 tahun di Puskesmas Winong Kabupaten Purworejo

Metode Penelitian: jenis penelitian ini adalah deskriptif korelasi dengan rancangan *Cross Sectional* . Lokasi penelitian di Wilayah kerja Puskesmas Winong. Pengambilan sampel secara *simple random sampling* , dengan jumlah sampel sebanyak 65 pasang responden yang terdiri dari ibu primipara dan anaknya yang berumur kurang dari 2 tahun. Penelitian dilaksanakan bulan Mei - Juni 2012 . Analisis data menggunakan uji statistik spearman rank correlation dengan SPSS 17,0.

Hasil : Tingkat pengetahuan ibu primipara sebagian besar termasuk dalam kategori sedang (44,6%) dan perkembangan bahasa anak sebagian besar termasuk dalam kategori baik (47,7%). Hasil uji statistik korelasi Spearman rank didapatkan nilai p value = 0,000 dan nilai Rho = 0,764.

Kesimpulan : Ada hubungan yang bermakna antara pengetahuan ibu primipara tentang stimulasi tumbuh kembang dengan perkembangan bahasa anak usia kurang dari 2 tahun di Puskesmas Winong Kabupaten Purworejo

Kata kunci : pengetahuan ibu primipara, stimulasi, perkembangan bahasa.

**RELATIONSHIP KNOWLEDGE OF PRIMIPAROUS MOTHER ABOUT DEVELOPMENT
GROWTH STIMULATION WITH DEVELOPMENT CHILD LANGUAGE LESS THAN 2 YEARS
IN PUBLIC HEALTH CENTER WINONG PURWOREJO**

ABSTRACT

Prihati Yuningrum ¹, Fahrudin ², Nani Kanari ³

Background : Language development in children is influenced by several factors, including knowledge and language stimulation. With early stimulation, expected language skills in children will be optimized so as to improve the quality of communication. Children aged less than 2 years is very dependent on peoples who are around, especially mothers. For this reason it is expected, women should be more aware and concerned about child development. Mothers should be aware of early detection due to the level of child development knowledge and parenting mothers influence the development of children's language

Research Objectives : To know the relationship of primiparous mother knowledge about the stimulation of growth and development with language development of children aged less than 2 years at the public health center Winong Purworejo.

Research Methods : This research type is correlation descriptive with cross sectional design. Research of location was at working area Winong public health center. The samples are taken by simple random sampling in May – June 2012, with a sample group of 65 pairs of respondents consisted of primiparous mothers and their children aged less than 2 years. The experiment was conducted months of May-June 2012. Data analysis using statistical tests rnk spearman correlation with SPSS 17.0. Sample of as many as 65 pairs of respondents consisted of primiparous mothers and their children aged less than 2 years. The data was analyzed by using spearman rnk correlations with SPSS 17,0.

Results : The level of knowledge most of the primiparous mothers included in the medium category (44.6%), and most children's language development is included in good categories (47.7%). The results of Spearman rank correlation test statistics obtained p value = 0.000 and the value of Rho = 0.764.

Conclusion : There was a significant relationship between mother primiparous knowledge about the stimulation of growth and development of primiparous with language development of children aged less than 2 years at the health center Winong Purworejo

Keywords : primiparous mothers knowledge, stimulation, development of language.
