ABSTRACT

Backgroud : Tatanus Neonatorum (TN) was one of major death causes in babies which took the third place with 11% of proportion (SDKI, 2007). TN cases occurred as results of low TT immunization and antenatal health care to pregnant mothers. The low TT immunization and antenatal care could be resulted from many factors, one of which was pregnant mothers knowledge in behaving.

Objective : To identify the relation between knowledge level of mothers with third three-semster pregnancy abaot tetanus toxoid immunization with tetanus toxoid immunization complement in Ngaglik I community health center and Ngaglik II.

Method : This was a descriptive research using analylical survey design. With cross-sectional approach. Research site were in Ngaglik I community health center and Ngaglik II. Population were 30 mother with third three-semester pregnancy with total sampling technique. Data collecting was by questionnaires ang analysis technique was by KIA book using univariate anf bivariate analysis.

Result : Research result indicated that knowledge level of pregnant mothers abaot TT immunization werea mostly in good category anf TT immunization complement in pregnant mothrs were mostly in complete category. There was a close relation between knowledge level of mothers with third three-semester pregnancy abaot TT immunization and TT immunization complement.

Conclusion : Suggestion for community health center to increase health dissemination to pregnant mothers abaot TT immunization. Midwives give motivation to pregnant mothers to have complete TT immunization.

Keywords : Knowledge level, Mothers with third three-semester pregnancy, TT immunization

INTISARI

Latar Belakang : Tetanus Neonatorum (TN) merupakan salah satu penyebab kematian utama pada bayi yang menempati urutan ke 3 dengan proporsi 11% (SDKI, 2007). Kejadian TN timbul sebagai akibat pelayanan kesehatan antenatal dan imunisasi TT kepada ibu hamil yang masih rendah. Masih rendahnya pelayanan antenatal dan imunisasi TT serta masih tingginya angka kematian bayi karena TN dapat disebabkan oleh berbagai faktor, salah satunya adalah pengetahuan ibu hamil untuk berperilaku.

Tujuan : Mengetahui hubungan tingkat pengetahuan ibu hamil trimester III tentang imunisasi Tetanus Toxoid dengan kelengkapan imunisasi Tetanus Toxoid di Puskesmas Ngaglik I dan Puskesmas Ngaglik II.

Metode Penelitian : Penelitian deskriptif menggunakan desain survei analitik, dengan pendekatan *cross sectional*. Tempat penelitian di Puskesmas Ngaglik I dan Puskesmas Ngaglik II. Populasi berjumlah 30 ibu hamil TM III, dengan teknik sampel menggunakan *total sampling*. Pengumpulan data dengan kuesioner dan buku KIA serta menggunakan analisis univariat dan analisis bivariat.

Hasil : Hasil penelitian didapatkan tingkat pengetahuan ibu hamil tentang imunisasi TT mayoritas dalam kategori baik, kelengkapan imunisasi TT pada ibu hamil mayoritas dalam kategori lengkap. Ada hubungan yang cukup kuat antara pengetahuan ibu hamil TM III tentang imunisasi TT dengan kelengkapan imunisasi TT.

Kesimpulan : Saran bagi puskesmas supaya lebih meningkatkan lagi penyuluhan kesehatan pada ibu hamil tentang imunisasi TT. Bidan memotivasi ibu hamil untuk melakukan imunisasi TT lengkap.

Kata Kunci : Tingkat Pengetahuan, Ibu Hamil TM III, Imunisasi TT
