HUBUNGAN TINGKAT PENGETAHUAN IBU HAMIL TRIMESTER III TENTANG TANDA BAHAYA PERSALINAN DENGAN RENCANA PEMILIHAN TEMPAT PELAYANAN KESEHATAN DI BPS PIPIN HERIYANTI YOGYAKARTA

Yuli Ravika Ningsih¹, Nunik Endang², Alfie Ardiana Sari³

Latar Belakang : Data mengenai angka kematian ibu dapat diperoleh dari hasil Survei Demografi dan Kesehatan Indonesia yang terakhir tahun 2007 berjumlah 228/100.000. Angka Kematian Ibu (AKI) D.I Yogyakarta pada tahun 2009 berjumlah 48 ibu, mengalami penurunan pada tahun sebelumnya yaitu 104/100.000, sedangkan di kota Angka Kematian Ibu yaitu 4 ibu (yang terlapor). Dari hasil wawancara terhadap 10 orang ibu hamil trimester III tentang tanda bahaya persalinan, 7 orang ibu hamil kurang begitu mengerti tentang tanda bahaya persalinan dan ibu juga masih bingung dalam pemilihan tempat pelayanan kesehatan apabila ibu mengalami salah satu dari tanda bahaya persalinan.

Tujuan : Mengetahui hubungan tingkat pengetahuan ibu hamil trimester III tentang tanda bahaya persalinan dengan rencana pemilihan tempat pelayanan kesehatan di BPS Pipin Heriyanti.

Metode : Menggunakan metode penelitian survey analitik dengan pendekatan *cross sectional* Penelitian dilakukan di BPS Pipin Heriyanti pada tanggal 19 Juni-2 Juli 2011. Subyek penelitian adalah ibu hamil trimester III sebanyak 40 orang. Uji stasistik menggunakan koefisien kontingensi. Dari hasil stasistik dengan uji koefisien kontingensi X^2 hitung (22,907) > X^2 tabel (5,991) dan p-value (0,000) < 0,05. Berarti hipotesis nol (H_0) ditolak dan hipotesis alternatif (H_a) diterima. Instrument menggunakan kuesioner tertutup.

Hasil : Tingkat pengetahuan ibu hamil trimester III tentang tanda bahaya persalinan dalam kategori baik sebanyak (77,5%), yang memilih di Rumah Sakit sebanyak (82,5%).

Kesimpulan : Ada hubungan antara tingkat pengetahuan ibu hamil trimester III tentang tanda bahaya persalinan dengan rencana pemilihan tempat pelayanan kesehatan di BPS Pipin Heriyanti.

Kata Kunci : tanda bahaya persalinan, pemilihan tempat pelayanan kesehatan
