

HUBUNGAN PENGETAHUAN IBU NIFAS PRIMIPARA TENTANG KOLOSTRUM DENGAN PERILAKU PEMBERIAN KOLOSTRUM PADA BAYI BARU LAHIR DI BPS WATI SUBAGYA PRAMBANAN SLEMAN YOGYAKARTA

Ika Sarwendah¹ AtikBadi'ah²Nur Rahmawati Sholihah³

INTISARI

Latar Belakang: Hasil studi pendahuluan yang telah dilakukan terhadap 11 orang ibu nifas diketahui bahwa 45% ibu sesuai dengan tingkat pengetahuan dan perilaku pemberian kolostrum dalam kriteria sedang sedangkan 35% ibu dalam kriteria baik dan 20% ibu dalam kriteria kurang. Oleh karena itu pengetahuan ibutentang kolostrum perlu ditingkatkan.

Tujuan Penelitian: Diketuinya hubungan pengetahuan ibu nifas primipara tentang kolostrum dengan perilaku pemberian kolostrum pada bayi baru lahir di BPS Wati Subagya Prambanan Sleman Yogyakarta

Metode Penelitian: Metode penelitianini adalah non eksperimen dengan desain *observasional*, menggunakan analisis korelasi dengan desain *cross section*. Jumlah sampel yang digunakan dalam penelitian ini berjumlah 30 responden dari BPS Wati Subagya Prambanan Sleman Yogyakarta. Teknik analisis data menggunakan korelasi *Spearman Rank*.

Hasil: Ada hubungan bermakna pengetahuan ibu nifas primipara dengan perilaku pemberian kolostrum,dengan nilai probabilitas (p) sebesar 0,001 dengan taraf signifikansi sebesar 0,05. Hal tersebut berarti nilai probabilitas yang lebih kecil dari taraf signifikansi ($0,001 < 0,05$).Nilai korelasi *Spearman* menunjukkan angka sebesar 0,574 yang mempunyai arti tingkat keeratan hubungan antar variabel dalam kategori sedang.

Kesimpulan: Ada hubungan pengetahuan ibu nifas primipara tentang kolostrum dengan perilaku pemberian kolostrum pada bayi baru lahir di BPS Wati Subagya Prambanan Sleman Yogyakarta.

Kata Kunci: Pengetahuan ibu nifas, perilaku pemberian kolostrum

**THE RELATION OF KNOWLEDGE MOTHER PRIMIPARA
PARTURITION ABOUT COLOSTRUM WITH BEHAVIOR OF GIVING
COLOSTRUM AT NEW BORN INFANT IN BPSWATI SUBAGYA
PRAMBANAN SLEMAN YOGYAKARTA**

Ika Sarwendah¹ AtikBadi'ah² Nur Rahmawati Sholihah³

ABSTRACT

Background: The preliminary studies results that have been conducted on 11 parturition mothers obtained that 45% of mothers appropriate to the level of knowledge and behavior of giving colostrum in the moderate criteria 35% whereas mothers in the good criteria 20% and mothers in the less criteria. Therefore mothers knowledge about colostrum needs to be improved.

Research objectives: This study aims to determine the relation of knowledge mother primipara parturition about colostrum with behavior of giving colostrum at new born infant in BPS Wati Subagya Prambanan Sleman Yogyakarta

Research Methods: This research method is a non experimental with *observational* design, using correlation analysis with the *cross section* design. The number of samples used in this study amounted to 30 respondents from the BPS Wati Subagya Sleman Prambanan, Yogyakarta. The data analysis techniques using the *Spearman Rank* correlation.

Results: There were significant relationships of knowledge mothers primipara parturition with behavior of giving colostrum, with a probability value (p) of 0.001 with a significance level of 0.05. This means a probability value with smaller than significance level ($0.001 < 0.05$). The *Spearman* correlation value indicates numbers of 0.574 that have a sense of closeness level of relationship between variables in the medium category.

Conclusion: There is a relation of knowledge mother primipara parturition about colostrum with behavior of giving colostrum at new born infant in BPS Wati Subagya Prambanan Sleman Yogyakarta.

Keywords : knowledge of mother parturition, behavior of giving colostrum
