**ABSTRACT**

**Background :** Higher education plays a crucial role in the development of a country, with far-reaching impacts on the social, economic and intellectual progress of its people. The Special Region of Yogyakarta (DIY) is known as one of the centers of higher education that is able to attract students from various regions in Indonesia. Despite its reputation for providing quality education, it is important to understand that student academic performance is not solely dependent on the reputation of the institution. Therefore, it is necessary to understand and conduct in-depth research on how motivation and other factors affect academic achievement, particularly in the Special Region of Yogyakarta.

**Objective :** To determine whether or not there is an effect of organizational activeness and learning motivation partially and simultaneously on the academic achievement of students in the Special Region of Yogyakarta.

**Method :** The research used quantitative methods with logistic regression analysis using the help of the SPSS 27 application.

**Result :** Based on the results of data processing, it is found that the significance value for the organizational activeness and motivation variables is 0.361 and 0.953, respectively. Meanwhile, the significance value in the omnibus test of model table is 0.551.

**Conclusion :** The variables of organizational activeness and learning motivation partially and simultaneously have no influence on the academic achievement of students in the Special Region of Yogyakarta.

**Keywords :** organizational activeness, learning motivation, academic achievement.
