ABSTRACT

This study aims to determine the influence of the Good Corporate Governance mechanism on financial performance in state-owned companies listed on the Indonesia Stock Exchange. GCG is measured using the number of board of commissioners, independent commissioners, board of directors, audit committee, managerial ownership, institutional ownership and financial performance measured by Return on Asset (ROA), Return on Equity (ROE) and Tobin's Q. The research sample consisted of 10 state-owned companies listed on the Indonesia Stock Exchange during the 2020-2023 period. The data collection method in this study uses the purposive sampling method and hypothesis testing is carried out using a panel data regression model. The results show that only partial managerial ownership affects ROA, only the board of commissioners affects ROE, and only managerial ownership affects Tobin's Q.
