

## INTISARI

### GAMBARAN PENGETAHUAN IBU POST PARTUM TENTANG PERAWATAN TALI PUSAT PADA BAYI DI BPS SUMARNI SRI HARDONO PUNDONG BANTUL

Maya Kurniasari<sup>1</sup>, Elvika Fit Ari Shanti<sup>2</sup>

**Latar Belakang :** Perawatan tali pusat yang kurang bersih diperkirakan akan menyebabkan infeksi sehingga bisa mengakibatkan kematian bayi sebanyak 220.000 bayi di Asia Tenggara (Wijaya, 2006). Pengetahuan ibu yang baik tentang perawatan tali pusat, maka bayi akan memperoleh perawatan yang baik dan benar sehingga tali pusat akan lepas pada hari ke 5 dan hari ke 7 tanpa ada komplikasi (Ngastiyah, 2005).

**Tujuan Penelitian :** Untuk mengetahui gambaran pengetahuan ibu post partum tentang perawatan tali pusat di BPS Sumarni Sri Hardono Pundong Bantul.

**Metode Penelitian :** Jenis penelitian deskriptif dengan pendekatan *survey*. Sampel diambil dengan teknik *accidental sampling*, sehingga diperoleh jumlah sampel sebanyak 30 ibu post partum. Instrumen penelitian adalah kuesioner dan hasil penelitian dianalisis dengan distribusi frekuensi relatif atau prosentase.

**Hasil Penelitian :** Tingkat pengetahuan ibu post partum tentang perawatan tali pusat pada bayi di BPS Sumarni Sri Hardono Pundong Bantul adalah kategori cukup (43,3%). Tingkat pengetahuan tentang pengertian perawatan tali pusat kategori baik (70%). Tingkat pengetahuan tentang tujuan perawatan tali pusat kategori baik (73,3%). Tingkat pengetahuan tentang manfaat perawatan tali pusat kategori baik (90%). Tingkat pengetahuan tentang metode perawatan tali pusat kategori kurang (40%). Tingkat pengetahuan tentang dampak perawatan tali pusat kategori baik (43,3%).

**Kesimpulan :** Tingkat pengetahuan ibu post partum tentang perawatan tali pusat pada bayi di BPS Sumarni Sri Hardono Pundong Bantul adalah kategori cukup.

**Kata Kunci :** Pengetahuan, ibu post partum, perawatan tali pusat.

**ABSTRACT****THE DESCRIPTION OF THE KNOWLEDGE LEVEL OF POSTNATAL MOTHERS ABOUT UMBILICAL CORD CARE FOR INFANTS IN PRIVATE PROFESSION PRACTICE MIDWIFE SUMARNI SRI HARDONO, PUNDONG SUB DISTRICT, BANTUL REGENCY**

Maya Kurniasari<sup>1</sup>,Elvika Fit Ari Shanti<sup>2</sup>

**Background :** unhygienic umbilical cord care is expected to be the source of infection so that it may cause fetal mortality as many as 220.000 infants in South East Asia (Wijaya, 2006). Proper knowledge of mothers about umbilical cord care will bring about proper care for infants and disengagement of the umbilical cords in the fifth and seventh days without any complications (Ngastiyah, 2005).

**Objective :** to disclose the description of the knowledge level of postnatal mothers about umbilical cord care for infants in Private Profession Practice Midwife Sumarni Sri Hardono, Pundong Sub District, Bantul Regency

**Method :** This was a descriptive study with survey approach. Samples were 30 postnatal mothers who were identified with accidental sampling technique. The study instrument was questionnaire and the result was put into analysis with relative frequency or percentage.

**Result :** The knowledge level of postnatal mothers about umbilical cord care for infants in Private Profession Practice Midwife Sumarni Sri Hardono, Pundong Sub District, Bantul regency, was in sufficient category (43,3 %). The knowledge level about the definition of umbilical cord care was in good category (70 %). The knowledge level about the aim of umbilical cord care was in good category (73,3 %). The knowledge level about the advantage of umbilical cord care was in good category (90 %). The knowledge level about the method of umbilical cord care was in poor category (40 %). The knowledge level about the effect of umbilical cord care was in good category (43,3 %).

**Conclusion :** The knowledge level of postnatal mothers about umbilical cord care for infants in Private Profession Practice Midwife Sumarni Sri Hardono, Pundong Sub District, Bantul regency, was in sufficient category.

**Keywords :** Knowledge, Postnatal Mothers, Umbilical Cord Care.
