Latar Belakang : Kunjungan Antenatal care (ANC) adalah kunjungan ibu hamil ke bidan atau dokter sedini mungkin semenjak merasa dirinya hamil untuk mendapatkan pelayanan/asuhan antenatal. Seorang ibu hamil minimal harus melaksanakan pemeriksaan kehamilan sebanyak 4 kali yaitu trimester I sebanyak 1 kali, trimester II sebanyak 1 kali, trimester III sebanyak 2 kali (Saefudin, 2006). Data Dinas Kesehatan RI tahun 2011 menuliskan cakupan K1 sebesar 95,26%, dan cakupan K4 sebesar 85,56%, sedangkan dari data Dinas Kesehatan Propinsi DIY pada tahun 2011 cakupan K1 sebesar 100%, dan cakupan K4 sebesar 89,3%. Sedangkan 5 Kabupaten di wilayah DIY untuk cakupan K4 yang paling tertinggi adalah Kabupaten Yogyakarta 90,9% sedangkan yang paling rendah adalah Kabupaten Bantul 88,0%. Data yang diperoleh di Puskesmas Kasihan Bantul II tahun 2010 cakupan K4 sebesar 81,5% (DinKes DIY, 2011).

Tujuan : Untuk mengetahui proporsi cakupan K4 pada ibu hamil Trimester III Di BPS Ummu Hani, Kasongan, Kasihan, Bantul.

Metode Penelitian : Penelitian ini menggunakan metode *deskriptif* dengan pendekatan *retrospektif*. Populasi dari penelitian ini adalah ibu hamil yang berkunjung di BPS Ummu Hani, Kasongan, Kasihan, Bantul. Metode pengambilan sampel adalah dengan menggunakan *total sampling*. Analisis ini digunakan *deskriptif prosentase*.

Hasil : Didapatkan bahwa proporsi cakupan K4 pada ibu hamil kategori teratur sebanyak 20 responden (58,8%) dan kategori tidak teratur sebanyak 14 responden (41,2%).

Kesimpulan : Cakupan K4 ibu hamil TM III K4 di BPS Ummu Hani Kasongan, Kasihan, Bantul teratur ditandai dengan hasil penelitian yang dilakukan yaitu ada 20 responden (58,8%).

Kata kunci : Proporsi Cakupan K4

**PROPORTION OF COVERAGE K4 III TRIMESTER PREGNANT WOMEN IN
BPS UMMU HANI KASONGAN KASIHAN
BANTUL**

ABSTRACT

Farah Fauzi Anum¹, Nur Rahmawati Sholihah, SST²

Background: Visit Antenatal care (ANC) is a pregnant mother's visit to the midwife or doctor as early as possible since found out she was pregnant to get care / antenatal care. A pregnant woman must carry a minimum of prenatal care are 4 times as much as 1 times the first trimester, second trimester 1 time, 2 times sebayak third trimester (Saefudin, 2006). Office of Health Data in 2011 wrote K1 coverage of 95.26%, and 85.56% for K4 scope, while the data from the Provincial Health Office in 2011 amounted to 100% coverage of K1 and K4 coverage of 89.3%. Meanwhile, District 5 in DIY for K4 scope is the most highest Regency Yogyakarta 90.9% while the lowest was 88.0% Bantul regency. The data obtained in Poor Bantul Health Center II in 2010 amounted to 81.5% coverage of K4 (DIY Health Office, 2011).

Objective: To determine the proportion of K4 coverage among pregnant women in the third trimester CPM of Umm Hani, Kasongan, Poor, Bantul.

Methods: This study used descriptive retrospektif approach. The population is pregnant women who visit the BPS Ummu Hani, Kasongan, Kasihan, Bantul. The sampling method is to use a total sampling. This analysis used descriptive percent.

Results: From the results of the descriptive analysis of the percentage, obtained the majority of the respondents aged between 20-35 years, that there are 29 respondents (85.3%), education level up to high school level, there are 15 respondents (44.1%) and was the mother households (IRT), ie there are 15 respondents (44.1%), a mother with gestational age of 33 weeks, that there are 5 respondents (14.7%) and pregnant women with TM III K4 scope of regular, ie there are 20 respondents (58.8%).

Conclusion: Scope K4 pregnant women with TM III K4 in BPS Ummu Hani Kasongan, Kasihan, Bantul scope of regular marked with the result of research performed a total of 20 respondents (58.8%).

Keywords : Proportion Scope K4
