INTISARI

Latar Belakang : Survei Persatuan Perawat Nasional Indonesia tahun 2006 menyatakan bahwa 50,9% perawat mengalami stress kerja yang antara lain disebabkan beban kerja yang tinggi. Perawat yang mempunyai kecerdasan spiritual yang tinggi mampu menyikapi stres kerjanya secara lebih positif yang akan berdampak pada asuhan keperawatan. Perawat sangat memerlukan tingkat spiritual yang tinggi untuk dapat melakukan *caring* dan pelayanan secara optimal. Survei kepuasan Rumah Sakit Penambahan Senopati Bantul menunjukkan 52% kurang puas dengan pelayanan di ruang rawat ICU.

Tujuan Penelitian : Mengetahui hubungan kecerdasan spiritual dengan sikap *caring* perawat di ruang rawat ICU Rumah Sakit Penambahan Senopati Bantul.

Metode Penelitian : Jenis penelitian deskriptif korelasi dengan pendekatan *cross sectional*. Sampel diambil dengan teknik *total populasi* yaitu 34 perawat di ICU dan IGD RSUD Panembahan Senopati Bantul. Instrumen penelitian adalah kuesioner. Hasil penelitian dianalisis dengan uji *Kendall's tau*.

Hasil penelitian : Perawat di ruang rawat ICU dan IGD Rumah Sakit Panembahan Senopati Bantul Yogyakarta memiliki kecerdasan spriritual yang tinggi (61,8%). Sikap *caring* perawat di ruang rawat ICU dan IGD Rumah Sakit Panembahan Senopati Bantul Yogyakarta adalah positif (70,6%). Hasil uji *Kendall tau* diperoleh nilai koefisien korelasi sebesar 0,437 dengan nilai p $0,000 < 0,05$

Kesimpulan : Ada hubungan yang positif kecerdasan spiritual dengan sikap *caring* perawat di ruang rawat ICU dan IGD Rumah Sakit Panembahan Senopati Bantul Yogyakarta.

Kata kunci : Kecerdasan spiritual, sikap *caring*

THE CORRELATION BETWEEN SPIRITUAL QUOTIENT AND NURSE CARING BEHAVIOR IN INTENSIVE CARE UNIT (ICU) AND EMERGENCY UNIT (IGD) OF RSUD PANEMBAHAN SENOPATI BANTUL

M Nasir¹ Muhamat Nofianto² Sarka Ade Susana³

Abstract

Background: The union national survey nurse indonesia of 2006 stated that 50,9 % nurse stress experienced work caused the workloads high .Nurse who have high spiritual intelligence capable of in reaction to stress it works in more positive affecting their nursing care .Nurses were in severe need high spiritual level in order to make caring and services in an optimum manner .The hospital the addition of satisfaction survey shows 52 % senopati bantul less than satisfied with the services provided for in the ICU.

Objective of the study : To find out the corelation between spiritual quotient and nurses caring behavior in intensive care unit (ICU) and emergency unit (IGD) of RSUD Panembahan Senopati Bantul

Methodology : This research is descriptive and correlational research with cross sectional design. The samples were taken using total population sampling tecchnique as many as 34 nurses inthe ICU and IGD wards of RSUD Panembahan Senopati Bantul. The research instrument is questionnaire. The data were analyzed using Kndall Tau stastistical tecchnique.

Findings : The Nures of the ICU and IGD wards of RSUD Panembahan Senopati Bantul have high spiritual quotient (61.8%). The caring behaviors of the nurses of the ICU and IGD wards of RSUD Panembahan Senopati Bantul is positive (70,6%). The result of Kendall Tau statistical tecchnique has shown that the value of the correlation coefficient is 0.437 with $p = 0.000 < 0.05$.

Conclusions : There is a positive correlation between spiritual quotient and nurses caring behavior in intensive care unit (ICU) and emergency unit (IGD) of Panembahan Senopati Bantul

Keywords : Spiritual Quotient, Caring Behavior
