RINGKASAN

Latar belakang : *Continuity of care* yaitu pelayanan yang dicapai ketika terjalin hubungan yang terus menerus antara seorang wanita dengan bidan, asuhan yang berkaitan dengan tenaga profesional kesehatan. Bidan selaku tenaga kesehatan dapat melakukan upaya peningkatan pelayanan tersebut, agar dapat mendeteksi dini apabila terjadi komplikasi.

Tujuan : Mampu memberikan asuhan kebidanan secara komprehensif pada Ny. F umur 28 tahun mulai dari hamil, bersalin, nifas, neonatus dan KB.

Hasil : Hasil studi kasus didapatkan masa kehamilan dilakukan kunjungan sebanyak 3 kali, keluhan saat hamil nyeri gigi, nyeri punggung, dan riwayat USG plasenta previa, namun pada USG selanjutnya plasenta berada di fundus. Bersalin secara spontan di PMB dilakukan pertolongan persalinan sesuai APN dan asuhan komplementer gymball serta pijat oksitosin. Bayi baru lahir dilakukan kunjungan neonatus sebanyak 3 kali dalam kondisi fisiologis dan dilakukan pijat bayi saat usia bayi 1 bulan. Nifas dilakukan empat kali kunjungan dengan kondisi fisiologis dan diberikan asuhan komplementer pijat oksitosin. Diberikan pelayanan KB suntik 3 bulan.

Kesimpulan : Tidak terdapat kesenjangan antara teori dengan praktik dalam hal asuhan kebidanan yang diberikan. Asuhan yang diberikan pada pasien disesuaikan dengan kebutuhan dan kondisi pasien karena setiap individu memiliki keunikan masing-masing.

Kata Kunci: Asuhan Berkesinambungan, Multipara, Kebidanan.
