Latar Belakang: Keluarga Berencana merupakan usaha untuk menjarangkan atau merencanakan jumlah dan jarak kehamilan dengan memakai alat kontrasepsi yang sasaran utamanya adalah pasangan usia subur. Di Dusun Nglengkong Kidul cakupan peserta KB aktif belum memenuhi target Standar Pelayanan Minimal dalam indikator cakupan peserta KB aktif tahun 2010 yaitu sebesar 70%. Studi pendahuluan yang dilakukan pada 10 pasangan usia subur menunjukkan bahwa sebagian besar pasangan usia subur mempunyai persepsi negatif terhadap alat kontrasepsi.

Tujuan: Untuk mengetahui gambaran persepsi pasangan usia subur terhadap alat kontrasepsi di Dusun Nglengkong Kidul Desa Sumberrejo Tempel, Sleman, Yogyakarta.

Metode: Jenis penelitian yang digunakan adalah penelitian *deskriptif* dengan pendekatan survey. Pengambilan sampel pada penelitian ini menggunakan teknik *total sampling*. Penelitian ini dilakukan di Dusun Nglengkong kidul dengan subyek penelitian istri pasangan usia subur sebanyak 65 pasangan. Analisa data yang digunakan adalah analisis *univariate*.

Hasil Penelitian: Hasil penelitian menunjukkan bahwa gambaran persepsi pasangan usia subur terhadap alat kontrasepsi di Dusun Nglengkong Kidul Desa Sumberrejo, Tempel, Sleman yang berkategori positif adalah 29 pasangan usia subur (44,6%), dan negatif 36 pasangan usia subur (55,4%).

Kesimpulan: Gambaran persepsi pasangan usia subur terhadap alat kontrasepsi di Dusun Nglengkong Kidul Desa Sumberrejo, Tempel, Sleman berkategori negatif yaitu sebanyak 36 pasangan usia subur (55,4%).

Saran: Pasangan usia subur diharapkan untuk lebih aktif dalam memperoleh informasi kesehatan khususnya tentang alat kontrasepsi.

Kata Kunci: persepsi, pasangan usia subur, alat kontrasepsi.

ABSTRACT
THE DESCRIPTION OF FERTILE AGE COUPLE'S PERCEPTION
ABOUT CONTRACEPTIVE IN SOUTH NGLENGKONG VILLAGE
SUMBERREJO TEMPEL SLEMAN YOGYAKARTA

Siti Nurfatimah¹, Vivian Nanny Lia Dewi²

Background : Family Planning Program is an effort to decrease or to plan the number and the prevalence of pregnancy by using contraceptive with which the target are fertile age couples. The range of active family planning program participants in South Nglengkong Village hasn't yet fulfilled the target of Minimum Service Standard in the range of active family program participant indicator in 2010 which is 70%. The previous study which was done on 10 fertile age couples suggested that most of them had negative perception about contraceptive.

Research Objective : To know the description of fertile age couple's perception about contraceptive in South Nglengkong Village Sumberrejo Tempel Sleman Yogyakarta.

Research Method : The sort of research used is *descriptive research* with *survey approach*. The sampling technique in this research is *total sampling*. This research is conducted in South Nglengkong Village with 65 housewives of fertile age couples as the subject. The data analysis which is used is *univariate analysis*.

Result : The result of this research suggests that the description of fertile age couple's perception about contraceptive in South Nglengkong village Sumberrejo Tempel Sleman with positive category is 29 fertile age couples (44,6%) and 36 fertile age couples (55,4%) with negative category.

Conclusion : The description of fertile age perception about contraceptive in South Nglengkong Village Sumberrejo Tempel Sleman is stated to be negative category that is amounting 36 fertile age couples (55,4%).

Suggestion : Fertile age couples of the village are expected to be more active in acquiring or finding health information particularly about contraceptive.

Key Word : Perception, fertile aged couple, contraceptive
