

ABSTRACT

RELATIONSHIP OF KNOWLEDGE MOTHER ABOUT IMMUNIZATION OF MEASLES WITH LEVEL OF ANXIETY MOTHER AFTER IMMUNIZATION MEASLES IN HIS SON IN BP RB BINA SEHAT BANTUL YEAR 2011

Triyas Handayani¹, Murni², Ratna Prahesti³

Background: The problem deaths of measles the world's in 2002 as many as 777,000 are from countries ASEAN, and 15% of deaths measles are from Indonesia. Estimated 30,000 children Indonesia die every year due to complications of measles, it means 1 child dies every 20 minutes because every year more than 1 million children Indonesian have not been against immunized measles. In BP RB Bina Sehat, 6 out of 8 respondents said that they actually felt worried after her baby in immunization. They worry, anything happens to the baby post immunization.

Objective: Knowing the relationship of knowledge mothers about the immunization measles with levels anxiety mothers after immunization measles in children at BP RB Bina Sehat Bantul Year 2011.

Methods: This type of research using methods research *non experimental* with approach *cross sectional*. Technique samples *accidental sampling* obtained the number of samples as many as 46 people and analysis of data using *Kendall's tau*.

Results: Knowledge in BP RB Bina Sehat Bantul as quite many as 20 people (43,5%) of 46 respondents. Anxiety Mother post immunization measles in BP RB Bina Sehat Bantul is largely concerned with criteria minor as many as 18 people (39,1%). The results analysis correlation of *Kendall's tau* of 0,618 with a significance of 0,000. The amount probabilities calculate of *Kendall's tau* < probability $\alpha = 5\%$ ($0,000 < 0,05$), then H_0 is rejected and H_a accepted, this means there is relationship a significant between knowledge of mothers about immunization measles against by anxiety mother after immunization measles in children in BP RB Bina Sehat .

Conclusion: There is relationship a significant between knowledge mother about immunization measles against anxiety by mother post immunization measles in children.

Keywords: Relationships, Knowledge Immunization Measles, Anxiety after Immunization Measles

HUBUNGAN TINGKAT PENGETAHUAN IBU TENTANG IMUNISASI CAMPAK DENGAN TINGKAT KECEMASAN IBU PASCA IMUNISASI CAMPAK PADA ANAKNYA DI BP RB BINA SEHAT BANTUL TAHUN 2011

Triyas Handayani¹, Murni², Ratna Prahesti³

Latar Belakang : Masalah kematian akibat campak di dunia pada tahun 2002 sebanyak 777.000 berasal dari negara ASEAN, dan 15% dari kematian campak tersebut berasal dari Indonesia. Diperkirakan 30.000 anak Indonesia meninggal tiap tahunnya disebabkan komplikasi campak, artinya 1 anak meninggal tiap 20 menit karena belum terimunisasi campak. Di BP RB Bina Sehat, 6 dari 8 responden mengatakan bahwa mereka sebenarnya merasa cemas pasca bayinya di imunisasi. Mereka khawatir, terjadi sesuatu pada bayinya pasca imunisasi.

Tujuan : Mengetahui hubungan tingkat pengetahuan ibu tentang imunisasi campak dengan tingkat kecemasan ibu pasca imunisasi campak pada anaknya di BP RB Bina Sehat Bantul Tahun 2011.

Metode : Jenis penelitian ini menggunakan metode penelitian *non eksperimental* dengan pendekatan *cross sectional*. Teknik sampel *accsidental sampling* didapatkan jumlah sampel sebanyak 46 orang dan analisa data menggunakan *kendall's tau*.

Hasil : Pengetahuan di BP RB Bina Sehat Bantul yang cukup sebanyak 20 orang (43,5%) dari 46 responden. Kecemasan ibu pasca imunisasi campak di BP RB Bina Sehat Bantul sebagian besar adalah cemas dengan kriteria ringan sebanyak 18 orang (39,1%). Hasil analisis korelasi *Kendall's tau* sebesar 0,618 dengan signifikansi sebesar 0,000. Besarnya probabilitas *Kendall's tau* hitung $<$ probabilitas $\alpha = 5\%$ ($0,000 < 0,05$) maka H_0 ditolak dan H_a diterima, ini berarti ada hubungan yang signifikan antara pengetahuan ibu tentang imunisasi campak dengan kecemasan ibu pasca imunisasi campak pada anaknya di BP RB Bina Sehat. Saran untuk bidan hendaknya memberikan konseling tentang efek samping imunisasi campak.

Kesimpulan : Ada hubungan yang bermakna antara pengetahuan ibu tentang imunisasi campak dengan kecemasan ibu pasca imunisasi campak pada anaknya.

Kata Kunci : Hubungan, Pengetahuan Imunisasi Campak
Kecemasan pasca Imunisasi Campak
